

CNC communication and file management software for Windows™ systems

- cut machine downtime with remote program call-up†
- works with standard PCs, multiple-port serial cards, Ethernet/serial hubs, USB/serial hubs and 802.11 wireless ports
- load, store or drip-feed part programs, machine parameters and executive data
- setup wizard and sample machine configurations simplify installation and setup
- enhanced Explorer-style file manager features customizable buttons, simplified operation and powerful search features
- multiple-document program editor with side-by-side file comparison
- automatic naming of uploaded files by program number, part number or description
- configurable security and event logging protect data and assist with quality compliance
- no hardware key/lock or copy protection
- toll-free telephone support

FREE TRIAL COPY AVAILABLE

Dostek DNC™ is a powerful yet easy to use CNC communication and file management system for Windows™ computers (95, 98, NT4, ME, 2000 and XP). It provides high-speed CNC download, upload and drip feed (DNC), and works with standard PCs, multi-port serial cards, Ethernet/serial or USB/serial hubs, networks and wireless ports. Dostek DNC is available in your choice of three software "editions".

Professional Edition includes an explorer-style file manager, a program editor with side-by-side file comparison and a DNC communication application. To load or save a file, the CNC operator executes a send or receive command on the computer followed by a read (input) or punch (output) command on the CNC. Any number of CNCs can be connected to a central computer, or a separate computer can be installed at each CNC or work cell. Each computer can load or drip feed 4 or more CNCs at a time.

MultiPort Edition includes all features of the Professional Edition, plus a MultiPort DNC Server application with a "remote call-up" feature that allows CNC operators to upload, download and drip feed directly from their CNC. With MultiPort Edition, there is no need for CNC operators to leave their station to load or save files. Instead, operators send instructions directly to the computer by sending (punching) small "command" files. MultiPort Edition eliminates shop-floor computers and reduces setup time.

Lite Edition is a low cost package that's a great choice for basic applications. Lite Edition uses exactly the same top quality software components as Professional Edition, but with some of the more advanced features disabled. For example, side-by-side file comparison, advanced searching, and multi-machine drip feeding are only available in Professional and MultiPort editions.

† Dostek DNC MultiPort Edition

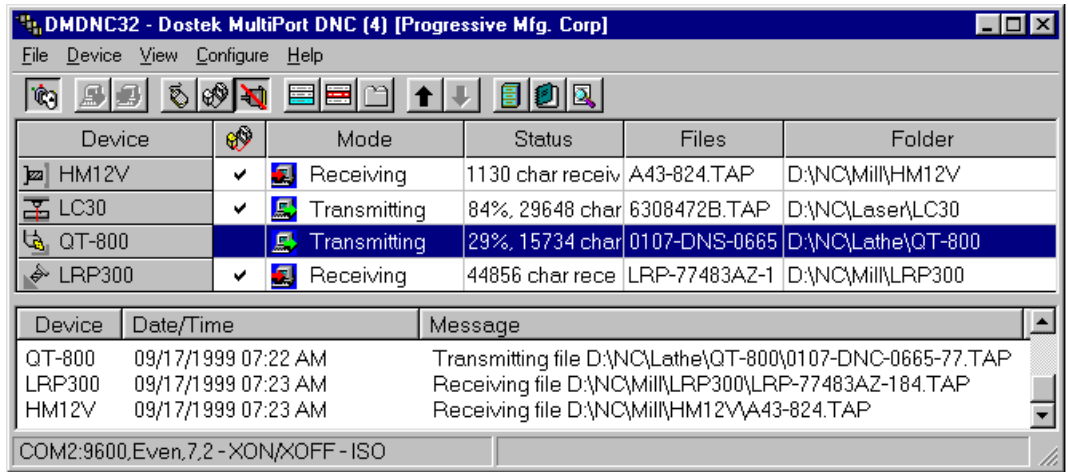

Easy to Install. Dostek DNC includes a convenient First-Time Setup Wizard that walks you through initial system configuration. Sample CNC communication configurations are provided, complete with on-screen notes including CNC parameter settings and operating instructions.

Easy to learn and use. The Dostek DNC user interface looks and works just like standard Windows applications, and provides clear, simple forms and numerous time-saving features.

Convenient remote call-up. With MultiPort Edition, there is no need for CNC operators to leave their station to load or save files. Instead, operators send requests directly to the computer using the CNC's control panel. Shop-floor computers are not needed; a single "DNC Server" computer in the office can upload, download and drip feed to all CNCs simultaneously.

Drip feed large files. With MultiPort Edition, all CNCs can drip feed simultaneously. With Professional Edition, you can easily drip feed large files to 4 or more CNCs simultaneously. You can preview and search the file before you start, and you can start or restart at any line. You can even set the multi-tasking priority to the highest level to prevent other applications from interfering with drip feeding.

Works with standard ports and hubs. Dostek DNC works with standard PC serial ports, serial boards and hubs. Proprietary hardware is not required. A computer with a single standard COM port can service several CNC machines (one at a time) using an inexpensive switch box. Or, a single computer can service dozens of machines using off-the-shelf multi-port serial cards or serial hubs (Ethernet, USB or wireless).

Enhanced explorer-style file manager. Looks and feels like Windows Explorer, but with many enhancements and security features. Restrict access to specific folders and file types, require a password for modifications, and define "QuickButton" shortcuts.

Find information fast. Search for files by name, date, content or any combination. Or quickly find all lines in a file containing specific text.

Edit multiple files. Simultaneously open multiple files of virtually unlimited size. You can copy text between files, search and replace text, undo and redo changes, as well as expand, compress, re-sequence and reformat CNC programs.

Side-by-side file comparison. The editor includes convenient side-by-side file comparison to help you find differences between files. You can quickly compare an original file with a modified copy to highlight differences. While most editors show you which lines are different, Dostek DNC also highlights the area of difference in each line. Options are provided to ignore N-block numbers, spaces and blank lines.

Cables, Boards, Accessories

Dostek offers a full range of CNC communication accessories, including quality standard and custom-build cables, multi-port communication boards (8, 16 or 32 ports), Ethernet/serial hubs (1 - 8 ports), USB/serial adapters and hubs (1 to 16 ports), wireless networking devices and Behind-the-Tape Reader (BTR) retrofits for older machine tools.
